Module Diagram of Hierarchy For Retail Tracking App

Retail Tracking App

Entity Relationship Diagram For Database

Data Dictionary for Message Table

Name	Description	Validation	Data Type	Sample Data
MessageID	Primary Key	Allocated DBMS	integer	1
CustomerID	Foreign Key	Presence check	integer	2
EmployeeID	Foreign Key	Presence check	integer	3
FromName	Message sender	Presence check	string	jack
ToName	Message receiver	Presence check	string	kevin
MessageStatus	Message unread or read	Presence check	boolean	read
MessageText	Message contents	Presence check	string	Hello, want ps4?
Product	Message selling point	Presence check	string	ps4
TimeStamp	Timestamp when sent	Presence check Format Check	Date	11/01/2022 11:48am

Data Dictionary for Customer Table

Name	Description	Validation	Data Type	Sample Data
CustomerID	Primary key for table	Allocated DBMS	integer	1
Username	Customer username	Presence check Length check	string	jack4two
Password	Customer password	Presence check Length check	string	pass
Forename	Customer first name	Presence check	string	jack
Surname	Customer second name	Presence check	string	mitchell
Email	Customers Email	Presence check Length check Between 2-20 char Format check @ .	string	jack@.com
Delivery Address	Customer Delivery address	Presence check	string	7 sultan road

Data Dictionary for Employee Table

Name	Description	Validation	Data Type	Sample Data
EmployeeID	Primary key for table	Allocated DBMS	integer	1
Username	Employee Username	Presence check Length check	string	employee1
Password	Employee Password	Presence check Length check	string	pass
Forename	Employee Firstname	Presence check	string	kevin
Surname	Employee Second Name	Presence check	string	spacey

Architecture

Front End

The front end of the system is the user interface, basically any part of the system that is what the user will be looking at. I will be using guizero to make my front end GUI using python to create the interface and any event driven widgets inside it like buttons etc,

Back End

The back end of the system will be the parts of the system that the user does not see. This could be anything from the code to the database as both won't be seen by an end user. The code will be written in python and using packages of guizero I will be able to add all the functionality to the system and any event driven programming will be coded in the back end.

I will be using a database to store all of my data and to store data for use in other things

I want to also implement matplotlib to create graphs with data from the back end database

The database will be made with sqlite3 and my packages are, datetime, matplotlib, pillow, guizero

I will create my database with DDL SQL and manipulate the data.

Python Packages

The python packages I will be using are , matplotlib to create any graphs or visual data to show in the employees dashboard, another package I may use is PIL or Pillow to change the size of images and make GIFs animated, The main package though will be Guizero as this is how I am going to create the gui for the user to interact with. Other package that may be used are datetime for timestamps of messages and also pandas to manipulate the csv data to get the graphs.

Test Strategy 1

The way I am going to test my solution by working down the hierarchy starting with the first things to test this is because when I have to test other things they might have dependencies like needing the login button to be functional in order to test it.

Date of Test	Priority	Component being tested	Type of test to be carried out	Dependencies
11/01/2022	High	"Customer" Button	Functionality test	N/A
11/01/2022	High	"Employee" Button	Functionality test	N/A
11/01/2022	High	"Login" button for customer	Functionality Test	Depends on first test being done
11/01/2022	High	"Login" button for customer login page	Functionality Test	User inputs Depend on previous test
11/01/2022	High	"Back" buttons everywhere	Functionality Test	Depend on previous buttons
11/01/2022	High	"Sign-up" button	Functionality Test	Depend on previous buttons
11/01/2022	High	"Create Account" button	Functionality Test	User inputs
11/01/2022	High	"Create Account" button	Validation Tests	User inputs Depend on previous buttons
11/01/2022	High	Terms and conditions	Validation	User input
11/01/2022	Medium	"Products" button customer	Functionality	Depend on user login
11/01/2022	Medium	"Messages" button for customer	Functionality	Depend on user login
11/01/2022	High	"Login" button for employee	Functionality	N/A
11/01/2022	Medium	"Dashboard" button for employee	Functionality	Depend on user login
11/01/2022	Medium	"Message customers" button for employee	Functionality	Depend on user login

Test Strategy 2

11/01/2022	High	Check all error messages work	Functionality	Depends on inputting wrong data
11/01/2022	Medium	"Products" page works for employee	Functionality	N/A
11/01/2022	Low	"Dark mode" works	Functionality	N/A
11/01/2022	Low	"Light mode" works	Functionality	N/A
11/01/2022	Medium	Employees can message customers	Functionality	N/A
11/01/2022	Medium	Customers can message employees	Functionality	N/A
11/01/2022	Low	Run pylint	Performance test	N/A
